EDUCATION

Jamia Hamdard University

B.Tech - Computer Science and Engineering — CGPA: 8.14

Oct 2022 – Jun 2026

Delhi, India

COURSEWORK / SKILLS

- Data Structures & Algorithms
- Database Management System
- Operating Systems
- Computer Networks
- OOPS Concepts
- Web Development
- AI Agents

Experience

Ethara.ai

Jan 2026 – Present

LLM Post-Training Intern

Gurugram

- Built automated LLM post-training pipelines processing 40+ GitHub repositories, using Docker and Python to orchestrate patch execution and testing at scale.
- Automated image builds, patch execution, testing, and report generation, cutting manual pipeline setup time from approximately 2 hours to 20 minutes per run.
- Executed scalable workloads across 15+ parallel EC2 instances and managed 30+ container images in AWS ECR.
- Improved pipeline reliability through commit validation and structured logging, reducing failed runs by approximately 35%.

Z-Rehman InfoTech

Mar 2025 – Sep 2025

Frontend Developer Intern

Remote

- Developed and shipped 6+ responsive UI features using React.js, Tailwind CSS, and React Router for a customer-facing web application.
- Integrated and validated 20+ REST API endpoints using Postman, reducing integration bugs caught in QA by 25
- Debugged and optimized component rendering, improving page load time by 30
- Collaborated with a team of 4 developers in an Agile workflow, using Git for version control across 50+ commits.

PROJECTS

GPT-style Large Language Model from Scratch | Python, PyTorch, Transformer Architecture, Deep Learning

- Built a GPT-style Transformer (15M parameters) from scratch in PyTorch, implementing self-attention, causal masking, and positional embeddings across 6 Transformer blocks.
- Implemented custom BPE tokenization with a vocabulary of 8,000 tokens, trained on a corpus of 3M tokens.
- Achieved a validation loss of 1.8 after training for 5 hours on a single GPU.
- Developed autoregressive text generation with top-k sampling and temperature scaling, generating coherent text at 40 tokens/sec.
- [GitHub Repository](#)

Automated Attendance System Using Face Recognition | Python, OpenCV, MySQL, Tkinter

- Built a real-time face recognition attendance system using OpenCV, Haar Cascade, and LBPH, achieving approximately 95% recognition accuracy on a custom dataset of 50+ individuals.
- Integrated MySQL to automate attendance logging, reducing manual attendance processing time by approximately 80% for a class of 50+ students.
- Designed a Tkinter GUI enabling attendance capture and retrieval in under 2 seconds per person, tested across 500+ recognition attempts.
- Trained custom face datasets (1,000+ images), improving recognition accuracy by approximately 15% over the default LBPH baseline.
- [GitHub Repository](#)

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, SQL, HTML, CSS

Frameworks & Libraries: React.js, Express.js, Tailwind CSS

Cloud & DevOps: Docker, AWS EC2, AWS ECR, Linux

Databases: MySQL, MongoDB

Developer Tools: Git, GitHub, Postman, VS Code, IntelliJ IDEA, N8N
